

08 / ONLINE, CRM & MARKETING

Own the order. Build the next one.

Take direct orders through your own website and app, build your customer database and bring people back with marketing, loyalty and offers. Email, push notifications, SMS, loyalty and discounts run from one place.

Your own website and app

Give customers a direct route to your restaurant for online ordering. Connect the menu, collection and delivery options with the operation that fulfils the order. Your customers have a place to return that belongs to your business.

CRM and customer relationships

Build a customer database around your direct relationships. Customer records and ordering history give repeat business a foundation beyond individual transactions, with communication guided by customer preferences.

Email, push and SMS

Manage email, app push notifications and SMS from one place. Bring the channels together around your customer relationships, rather than managing each as a disconnected activity.

Loyalty, discounts and offers

Use loyalty and offers to give customers a reason to come back. Review the repeat business and margin an offer creates, alongside redemptions, so a busy promotion is also a useful one.

More control over margin and business value

Direct orders can reduce reliance on aggregator commission. Account for payment, platform, delivery and marketing costs when comparing margins. An established direct customer base and CRM also build an asset for your business; the effect on valuation depends on the business and its performance.

Use customer preferences and permissions to guide your communications, and judge campaigns by repeat business as well as sales.

Online, CRM & marketing / CRM, campaigns and your ordering app
