

07 / DRIVERS & DISPATCH

Less dispatch juggling. More orders moving.

Maistro connects live driver tracking with automatic dispatch and route planning. Driver availability also feeds into the kitchen workflow, helping preparation and delivery work to the same timing.

Live driver tracking

See the live driver picture alongside the delivery operation. Tracking gives the team visibility while dispatch and route planning coordinate the work.

Auto dispatch

Maistro automatically dispatches delivery work, reducing the need to coordinate each assignment manually. Dispatch sits alongside driver tracking and route planning as part of the delivery workflow.

Route planning

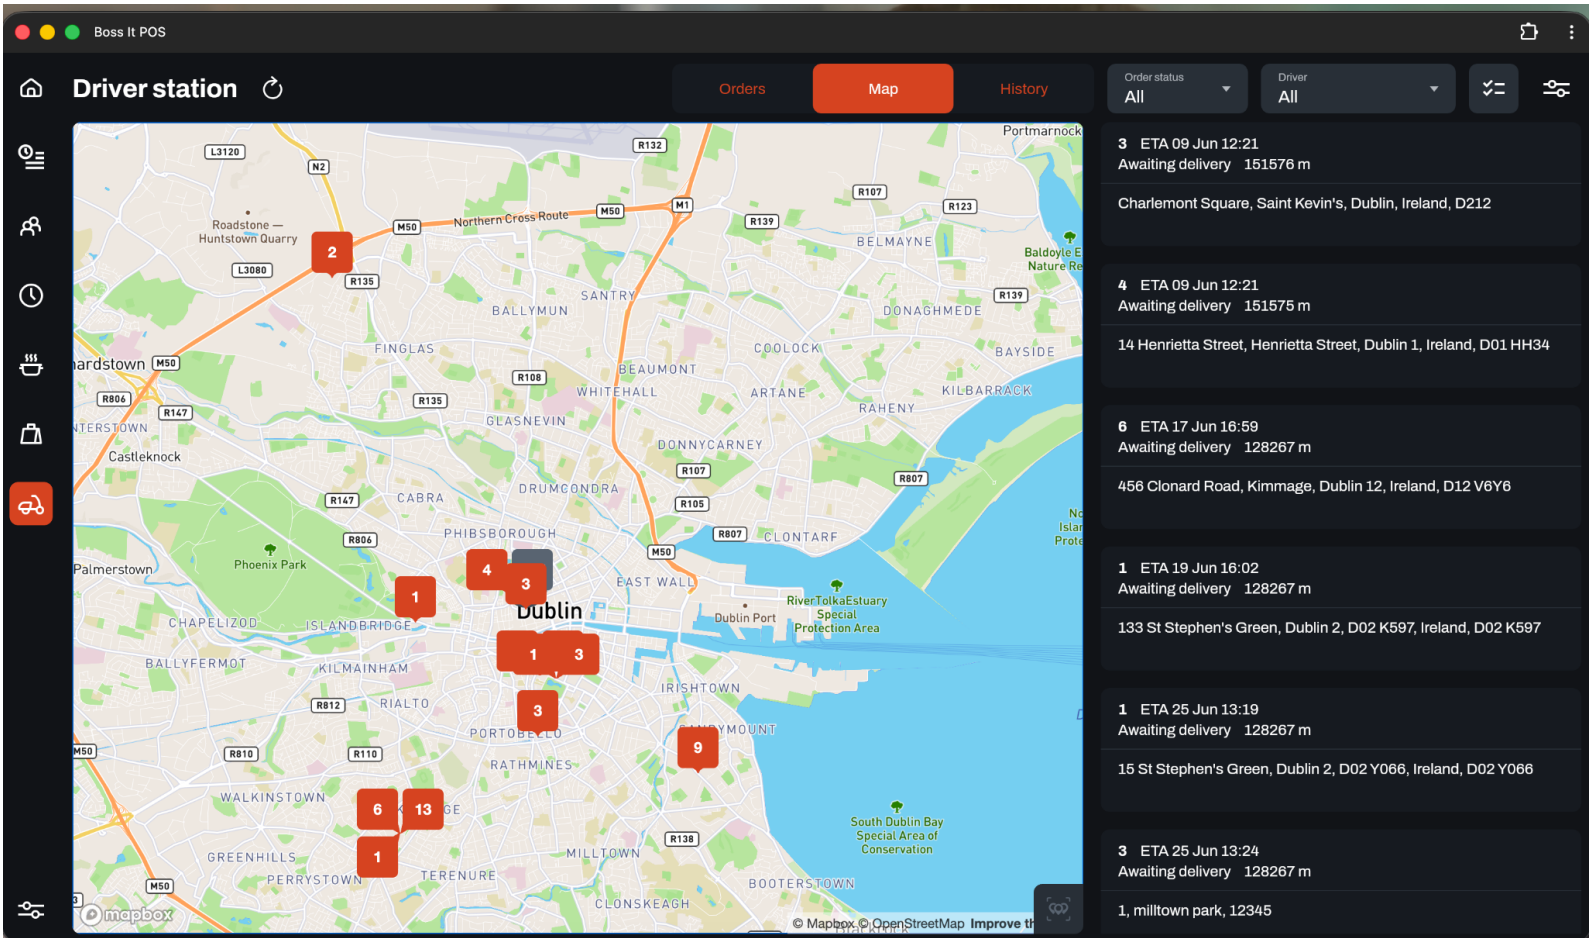

Route planning helps organise the delivery journey. It works alongside dispatch so getting an order out of the restaurant and planning its route are part of the same process.

A kitchen that knows about driver availability

The kitchen syncs with drivers and can hold orders until drivers are available. That connects preparation timing to the delivery situation, helping avoid food being prepared only to wait for someone to take it.

Dispatch, routes and kitchen timing work together. The delivery workflow is configured around your operation.
