

The right team. The right shift. Labour costs in view.

Maistro AI predicts the staff you will need using weather, events, holidays, past sales and other conditions. It then creates schedules based on that expected demand and staff holidays, bringing the trading forecast and the people plan together.

Predict the cover you need

AI uses multiple conditions to predict staffing requirements. Weather, events, holidays and sales history help build a picture of expected demand, giving the rota more context than a repeat of the previous week.

Create schedules around demand and staff holidays

Maistro turns those predictions into staff schedules and takes staff holidays into account. Expected trading levels and time off are considered together, helping you plan cover for the people who will actually be available.

See the labour picture

Review the cost of the staffing plan alongside expected sales. After service, compare the plan with actual attendance and trading to understand where staffing and demand lined up and where they differed.

Keep the shift connected

The staff app keeps the team in the loop. Staff can also clock in and out and record breaks through the POS, connecting the planned rota with a record of the shift that actually happened.

Public holidays shape demand. Staff holidays shape cover. Maistro brings both into the planning picture.

AI Staff scheduling / Weekly staff roster

NAME / ROLE	Mon 21	Tue 22	Wed 23	Thu 24	Fri 25	Sat 26	Sun 27	HOURS
Front of House								
Emma Clarke Bartender	15:00-20:00	15:00-20:00	15:00-20:00	15:00-20:00	15:00-20:00	15:00-20:00	15:00-20:00	35h
