

Protect your food margins. Start with what comes next.

Maistro AI forecasts sales and stock needs using weather, events, holidays, past sales and other conditions. Bring those predictions together with recipes, current stock and central ordering to plan what the business needs and keep food costs in view.

Forecast sales and stock needs

Maistro AI considers weather, events, holidays, sales history and other conditions to forecast demand and stock requirements. The result gives purchasing a forward view, rather than relying on last week's order.

Central ordering

Manage stock purchasing centrally, with supplier orders and internal venue orders in the stock workflow. Use forecast demand and current stock to plan requirements, then track orders through booking and receipt. Internal ordering connects a requesting venue with a supplying venue.

Recipes, sizes and portions

Connect products and modifiers to the ingredients and quantities they use. A small pizza, a large pizza and an extra topping can consume different amounts of the same ingredient. Those quantities connect sales to expected stock usage.

Theoretical versus actual usage

Theoretical usage is what recorded sales should have consumed according to recipes. Actual usage comes from stock movement and counts. For a simple period without transfers or other adjustments, it is opening stock plus purchases minus closing stock. Compare the same period and units to find the gap.

Counts, deliveries and waste

Keep receipts, counts, waste and transfers up to date so the stock picture is explainable. Supplier lead times matter when deciding when to order: the weekly example above shows how a forecast shortage can be spotted before service.

Illustrative example

€3,000 Expected food usage | €3,450 Actual food usage | €450 Variance to investigate

The €450 difference is not automatically recoverable profit. Check counts, recipes, waste, deliveries and timing before drawing a conclusion.

Central ordering here means stock purchasing and internal venue orders. The forecast supports the plan; counts and stock movements explain the result.

AI Stock & margins / Weekly demand forecast

PRODUCT / LEAD TIME	STOCK	Wed 23	Thu 24	Fri 25	Sat 26	Sun 27	Mon 28	Tue 29
